                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                   9
The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBF3). OBF3 is also known as SOB1. The transgenic plant cell and OBF3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBF3 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TTCGTGAAAAAATGCGCATGTTCTTGTTGGAATCTAGGAATCTTCTTCTACTAAAGATG

                                                                                               ö
           or
which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower colour fruit colour in plants. The present sequence represents the plasmid pAG3202 which is used in an example from the present invention for the generation of plants with an ANTI phenotype by transformation with an activation tagging construct
                                                                                                                                                                                                                                                                                                                                                                            GGGTGGGGCTCTTTGGGCCCTTTGGGTAGAGCCATCTTGAACGATAGCCTTTCC

ö The invention comprises a plant gene activation vector that contains a hairy-root induction gene and enhancer and/or promoter which can function in a plant. The vector of the invention is useful for analyzing a plant gene. The present DNA sequence is claimed in the invention. Plant gene activation vector-related DNA sequence pHR-AT-GFP - SEQ ID 14. Novel plant gene active vector comprising hairy-root induction gene, and enhancer and/or promoter that functions in plant, useful for activating plant gene forming hairy root.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a 4X cauliflower mosaic virus (CaMV) 35S chancer sequence preferred for use in the method of the invention. It includes 4 repeats of 202 bp Alui-EcokV fragments of the 35S enhancer, 2129 bp of the CaMV sequence associated with each tandem Alu-EcokV repeat, 2129 bp of the CaMV sequence associated with each tandem Alu-EcokV repeat, 2129 bp of the CaMV sequence, which does not appear in the cand an additional 7 bp repeated sequence, which does not appear in the companient of the native CaMV genome. This 4K CaMV 35S enhancer element can be used in a method for identifying genes associated with a desired trait in a fruit-bearing plant. The method involves: transforming CC plant cells with an activation tagging vector comprising an element which functions to enhance gene expression and has the ability to integrate into the plant genome in a manner effective to enhance expression of canive plant genes, selecting plant cells. regenerating cransformed plant cells to yield mature plants, selecting plants having a casived trait, identifying, isolating and characterizing genes the contribution of which has been enhanced, and confirming the contribution of the modified seed number, plants pathogens, insects, modified seed number, pattern or distribution of leaves and flowers modified seed number, pattern or distribution of leaves and flowers, modified seem length between nodes, root mass or root cand shape, modified seem length between nodes, root mass or root calculation and shape, and increased drought, salt and antibiotic contransers. Plants having short life cycles are transformed, as complified by dwarf varieties of tomato
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6239 TITITCCACGATGIICCICGIGGGIGGGGICCAICIITGGGACCACIGICGGIAGAGGC 6298

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 size
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBF3). OBF3 is also known as SOB1. The transgenic plant cell and OBF3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBF3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                        transgenic plant cell, useful in producing plants with altered size stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thallana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GITGGAAACITITITGTGTGTTCAITGAATAATCATCGAAITCTCAATITCTTGGAGACC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 uncleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       420
                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                       size
                                                                                                                                                                            The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                    cell, useful in producing plants with altered size normal and healthy root growth.
                                                                                                                                                                                                                                                                                                  The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 AGTACTTCATCACTTACTTCTCGCCCAAGTTACTCAAACCCTAGCAAGTTTCATAGCTAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, altered ametabolism, altered metabolism, altered ametabolism, altered amino acid metabolism, altered ester metabolism, altered amino acid metabolism, altered ester metabolism, altered stato, oxygenated terpene, or isoprenoid metabolism, altered stato), oxygenated terpene, or isoprenoid metabolism, altered stato), oxygenated terpene, or isoprenoid metabolism, altered stato). The DNA sequences of the invention may be used to provide disease resistance in a plant and gene building or sexual PCR procedures. The present nucleic acid represents a DNA sequence of the invention.
                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                                                                                                                                                                                                    Plant DNA sequence which confers altered metabolic characteristic #7187.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          420
                                                                                                                                                                                                                                                                                          The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polymuclectides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower sensecence. Sequence information related to the polymucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully cleffined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: chanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensitivity or later flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced escropic trichome development; altered trichome tevelopment; increased root growth; increased root hairs; altered stem morphology; increased root growth; increased root hairs; altered development; altered call proliferation or call differentiation, rapid development; premature sensecence; increased necrosis; increase in seedling or plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant
                                                                                                                      transgenic; plant; enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flower structure; stem bifurcation; branching pattern; apical dominance; trichome; stem morphology; root growth; root hair; seed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Haake V;

The invention relates to Arabidopsis thaliana nucleic acid sequences. The DNA sequences and the polypeptides they encode are useful for identifying homologous or related genes, for producing compositions that modulate the expression or function of the polypeptides, for mapping functional compositions that could be protein, in diagnosis, for studying associated complete the strains that are capable of various plant strains to determine the strains that are capable of withstanding a particular disease or environmental stress, for enhancing or inhibiting production of blosynthetic products in plants and to create genetically modified and transgenic organisms, such as plant cells and plants. Transgenic plants are useful for introducing or improving disease resistance and stress tolerance in plants, screening biologically active agents, such as functioned and insecticides, and for elucidating blochemical pathways. Sequences ABX5649-ABX55647 represent Arabidopsis thaliana collumn part of the printed specification but was obtained in electronic format directly from USPTO at sequence data for this patent collumn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel Arabidopsis thaliana nucleic acid useful for identifying homologous or related genes, and to create genetically modified and transgenic organisms, such as plant cells and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
